

TOUR TO BEEKEEPER

If we talk about Guadalajara, we talk about the Alcarria among other regions, but if we talk about this one, we are talking about an internationally known product, honey, declared as a Denomination of Origin since 1992, but which has been produced in our land since ancient times.

The main types of honey are:

- Single-flower honey lavender
- Single-flower honey rosemary
- multi-flower honey

In these guided tours, we will learn the secrets of bees and honey from the hand of a professional beekeeper where we can even do a tasting to differentiate the flavors of the different varieties and of course you can buy honey and other bee products.

It is possible to visit the beehives with all the protection material enabled for groups of up to 10 people

This complement is ideal for any of the routes in the province, but especially if you want to do guided tours of the Alcarria, since we are in the right place

Duration: The site visit consists of about 45 minutes.
